(54) **TECHNIQUE OF IMPROVING  
BIOAVAILABILITY OF LANSOPRASOLE**

## (57) Abstract:

**PROBLEM TO BE SOLVED:** To provide a novel oral preparation technique of enhancing the solubility and absorbability of lansoprasole in the digestive tract to

reliably attain a therapeutically effective drug concentration in blood.

**SOLUTION:** The preparation is prepared by formulating lansoprasole with a mixture of a 6-18C fatty acid/glycerol ester with a 6-18C fatty acid/macrogol ester.

Laparotomy was performed in Wistar male rat with body weight of 350 plus or minus 25 g under pentobarbital anesthesia. Suspension containing 5 mg of lansoprazole in 1 ml of 0.5% carboxymethylcellulose was poured into duodenum of rat at a dose of 5 mg/kg. Blood samples were collected from jugular vein after 30 minutes and 1-6 hours, and concentration of lansoprazole in plasma was measured by high performance liquid chromatography. Lansoprazole concentration ( micro g/ml) in plasma was 0.15 plus or minus 0.03 (after 30 minutes), 0.21 plus or minus 0.05 (after 1 hour), 0.26 plus or minus 0.03 (after 2 hours), 0.22 plus or minus 0.06 (after 3 hours), 0.16 plus or minus 0.05 (after 4 hours), 0.11 plus or minus 0.04 (after 5 hours) and 0.05 plus or minus 0.02 (after 6 hours). The gentamycin concentration in plasma after administering control formulation to rat was 0.05 plus or minus 0.01 (after 2 hours). All other plasma samples showed concentration, which was less than detection limit (0.02 micro g/ml) after 30 minutes, 1 hour and 3-6 hours.</p> <p>Dwg.0/0</p> <p>PDF Patent      Pub.
